

ROOTED EAST

Fictional Community Connection: Urban Garden

Element: Earth

Primary concerns: What are the primary goals for your group within Fauxville but also within the specific scenario the community currently finds themselves

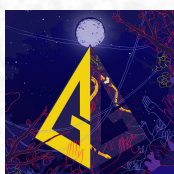

1. Provide the community with gardening education and resources
2. With the goal of preparing for potential disruptions to the agricultural supply chain caused by the data center
3. Connect community to food systems (i.e farmers markets, local farmers, community barter markets)
4. Empower community members to with food systems policy education to engage their local government and to make informed votes during the day

Thoughts on Data Center: Mostly anti, but has seen where there are some benefits. This puts you at odds with most of your crew who are largely pro-AI, however you are convinced that there need to be more precautions.

- Pro: Understanding of how AI can automate harvest data and provide ease for organizational systems
- Con: There are fears about sharing community data with government entities and AI data centers due to lack of ownership and concerns for data used to harm.
